

# DFIC 331

[Ficus carica](#) L. MORACEAE

Unverified name: Jurupa.

Collected in: California, United States

Maintained by the [Natl. Germplasm Repository - Davis](#). NPGS received: 17-Jan-2007. Life form: Tree. Form received: Cutting.

## Accession names and identifiers

Jurupa

Type: UNVERIFIED.

DFIC 331

Type: SITE.

## Availability

Contact site (DAV) for availability status.

## Narrative

Per Jurupa (see citation): "This is a hybrid of Dr. Condit's which was selected at the Jurupa Mountains Cultural Center by Julius E. Enderud. The tree is a vigorous grower. The fruit is pyriform and large, averaging about 90 grams (3 oz). There are 11 to a kilogram (5 per lb.) The skin is green. The eye is medium but fairly tight. The meat is white. The pulp is pink. The flavor is very good. A point in its favor.....it tends to bear a good breba crop as well as a main crop."

## Source History

- Type: Collected. Date: NEAR 1992. From: California, United States.  
Cooperators:
  1. [Jurupa Mountains Cultural Center](#).
- Type: Donated. Date: 17-Jan-2007. From: California, United States.  
Cooperators:
  1. [Polensky, D., Ohara Corp.](#)

Comment: Donated to NCGR, Davis.
