Figs

(Ficus carica) If you are among the many people who associate a fig tree with only a hot dry climate, you are in for a delicious surprise. Fig trees thrive in the Pacific Northwest and much of the nation.

D310 Desert King fig

(3 OR MORE \$17.50/ EACH); Top rated in the Pacific Northwest. A large fig with dark green skin and pink flesh. It is

the most consistent cropper in our region. It only produces one crop each year, in August, produced on the previous seasons growth, so don't cut more than half of that growth when pruning. [full description](#)

D312 Flanders Fig

Flanders is a highly productive, violet-stiped fruit with white flecks that is resistant to splitting. Its richly-flavored amber flesh is considered among the most flavorful of all figs. It requires a hot summer climate, or a greenhouse to ripen and obtain its outstanding flavor. [full description](#)

D362 Tashkent Fig**Photo Not Available**

This green fig has an excellent flavor.

Raintree brought it from Uzbekistan where it was the heavy producing

favorite among many cultivars in the garden

of a Uzbek horticulturist. The fruit is green

and flesh light colored with an excellent

flavor. It thrived in the cold Tashkent winter

but hasn't been tried in cold regions in the

United States. It has not set well in Raintree's

maritime climate and prefers areas with hot

summers. [full description](#)
