### Abstract

In this study, fruit quality characteristics of some cultivars and types of fig (*Ficus carica* L.) were determined in Dörtiyol, Hatay, Turkey, which has a Mediterranean climate. The main fig cultivars grown in Turkey ('Sarılop', 'Bursa Siyahi', 'Goklop', 'Yediveren', 'Yesilguz', 'Morguz', 'Sari Zeybek', and 'Ufak Yesil') were evaluated along with 24 selections from a larger collection from the Mediterranean Region of Turkey. Several pomological characteristics of the genotypes were determined on 5-year-old trees during the 2001 and 2002 growing season. Averaged over the 2 years, fruit weight ranged between 22 and 52 g, total soluble solids content (TSS) ranged between 20.1 and 27.4%, and acidity ranged between 0.09 and 0.26%. 'Bursa Siyahi', 'Goklop', 31-IN-17, 31-IN-11 and 31-IN-09 produced the largest fruits in terms of fruit weight and dimensions. 31-IN-01, 31-IN-02, 'Yesilguz', 'Morguz' and 'Ufak Yesil' had the highest TSS. 'Yediveren', 'Goklop', 'Bursa Siyahi' and 31-IN-16 scored the highest in overall quality according to the weighted ranked method. Based on the results obtained 'Yediveren', 'Goklop' and 31-IN-16 could be alternatives to 'Bursa Siyahi', currently the most favored fresh table fig cultivar. These alternatives appear to have potential for both local consumption and export markets. Our results also indicate extensive diversity among Turkish figs permitting marketing of a broad range of fresh fig traits.

## Article Outline

1. Introduction
2. **Materials and methods**
3. Results
  - 3.1. Pomological variables
    - 3.1.1. Fruit weight and width
    - 3.1.2. Fruit and neck length, ostiole width
    - 3.1.3. Soluble solids, pH, acidity and sugar/acid ratio
    - 3.1.4. Harvest time and yield
  - 3.2. Fruit and plant characteristics
    - 3.2.1. Fruit shape and stalk
    - 3.2.2. Abscission of stalk, peeling and cracking
    - 3.2.3. Skin thickness, rib, texture and color
    - 3.2.4. Plant growth habit, tree vigor, suckers, number of lobes and leaves per shoot
    - 3.2.5. Cluster analysis
  - 3.3. Weighted characterization
4. Discussion
